SUMMARY

SRE and backend engineer specializing in systems design, distributed infrastructure, and observability. Focused on building and maintaining production-grade systems end-to-end — from low-level kernel tooling and eBPF-based observability to cloud architecture, ML platform engineering, and backend services.

EDUCATION

B.S. in Computer Engineering | King Saud University

Jul 2023 – Jul 2028 (expected)

GPA: 4.56 / 5.0

EXPERIENCE

Site Reliability Engineer | *Entropy AI* | Riyadh, SA

Nov 2025 – Present

- Inherited a silent MinIO connection failure causing cascading ML platform hangs. Diagnosed a TLS handshake failure silently blocking MinIO under load; the fix cascaded, resolving multiple downstream issues. Handed full ownership of the ML backend: Metaflow spawning training pods, Temporal ensuring workflow durability, MLflow tracking experiments per job pod.
- Took full ownership of the observability stack (guided on scope by senior): instrumented with OpenTelemetry, deployed Prometheus, Grafana, Loki, Tempo, and Pyroscope; implemented exemplars linking traces to metrics, built node graphs, and defined SLIs across the platform.
- Architected a custom embedded analytics solution, eliminating enterprise licensing costs; engineered an Nginx reverse-proxy sidecar for header manipulation and a Node.js middleware for session pre-seeding.

TECHNICAL SKILLS

Languages: Python, Rust, Go, C++, Bash, Java, eBPF, Verilog

Cloud & Infra: AWS, GCP, Kubernetes, Docker, Terraform, Temporal

Observability: OpenTelemetry, Prometheus, Grafana, Loki, Tempo, Pyroscope

Systems: Linux (Arch), KVM, eBPF/XDP

ACHIEVEMENTS

1st Place – AWS GameDay (Networking & Security) | *Team Lead*

May 2025

- Led team under a divide-and-conquer strategy; solely owned all networking and security tasks: deployed an ALB, mitigated an HTTP flood attack via a custom WAF rule, redirected VPC Flow Logs to S3 to cut costs. Achieved **#1 in networking**, #4 overall.

PROJECTS

SPiCa – eBPF Rootkit Detection Engine | *Rust, eBPF (Aya)* Featured in *eCHO Newsletter*

2026

- Kernel-sovereign security observability tool detecting advanced rootkits (nysm, singularity, diamorphine, reptile) including via DKOM and PID Hollowing — rootkits confirmed to bypass **Elastic Security** and **CrowdStrike Falcon**.
- Architected a *Cross-View Differential* engine hooking `sched_switch` to compare CPU ground truth against `/proc`, enabling real-time hidden process detection with per-CPU LRU HashMaps for lock-free state tracking at **<1% system overhead**.
- github.com/0xKirisame/spica | kirisame.dev/blog/SPiCa

Shinkai Shoujo – Open-Source CIEM | *Rust*

2026

- Free, open-source Cloud Infrastructure Entitlements Management (CIEM) — agentless alternative to solutions like Wiz (\$100k+/year). Correlates OTEL traces with AWS IAM policies to surface unused permissions and auto-generates Terraform to enforce least-privilege access. Zero deployment required.
- github.com/0xKirisame/Shinkai-Shoujo

VOLUNTEERING

Tuwaiq Club at KSU | *Technical Leader*

2025 – Present

- Built a zero-config email automation system that parses a CSV directly to generate and dispatch personalized emails tailored to each training track with custom themes — no manual configuration required. github.com/Tuwaiq-Club-KSU/Tuwaiq-Club-Auto-Mailer

AWS Club at KSU | *VP of Technology*

2025 – Present

Future Technology Club | *Public Relations*

Jan 2025 – Sep 2025

- Built *Flandre Was Hungry* — a Python location intelligence tool harvesting café/bakery data from OpenStreetMap within a 50 km radius of KSU, auto-generating Excel reports (name, phone, website, coordinates) and identifying 300+ leads. Leveraged OSINT to enrich sponsor profiles with minimal public data. github.com/0xKirisame/Flandre_was_hungry

GameBox Hackathon | *Technical & Operations Team*

Nov 2025

- Conducted a pentest uncovering missing security headers and 3 exposed metadata endpoints.
- Replaced physical expo booths with a web-based solution: deployed WASM-compiled games via S3 + CloudFront, serving all attendees in-browser within free-tier cost limits. ftcgamebox.com
